## NetterVibration

## 30

## Netter Hydraulic External Vibrators Series CC, CV, CCV and DV

- Driven by flanged hydraulic motor
- Nominal frequency from $1.750 \mathrm{~min}^{-1}$ to $5.400 \mathrm{~min}^{-1}$
- Centrifugal force from 7.320 N to 49.210 N
- Frequency continuously adjustable by hydraulic pressure
- High working moment, high amplitude
- Low unit weight combined with high capacity
- Mounting by attachment screw (CCV), bracket (CC) or flange (CV/DV)

CV 2.8

## Application

Netter hydraulic external vibrators series CV, CC, CCV and DV are especially suitable to unload rail wagons and bulk hoppers as well as for the sieving and compacting of different materials.
Trucks and tractors which use hydraulic energy for dumping and lifting, are sources of hydraulic power.
A special feature of CC/CCV vibrators is the quick manual repositioning

## Design and functionning principle

The vibration (circular) is produced by unbalance pairs with double bearings. The frequency and thus the centrifugal force are continuously adjustable by the volume flow. The hydraulic external vibrators generate high amplitudes with low frequencies.
The working moment of series CC, CV, CCV and DV 2.8/4 is adjustable in 6 steps. The working moment of series DV 6-12,
-25 and -50 is continuously adjustable. The only difference between the units is the execution of the housings. The vibrators generate very high forces in proportion to their weight.

## Permissible operating conditions

## Drive medium:

Hydraulic oil (clean and filtered)
DIN 51524/25 or motor oil DIN 51511
Operating pressure:
Max. 80 bar inlet,
max. 2 bar outlet.
Ambient temperature:
$-20^{\circ} \mathrm{C}$ to $60^{\circ} \mathrm{C}$
NetterVibration offers the accessories required for the mounting, installation, control and monitoring of vibrators and impactors.
